English Abstract:

A method of handling cryptographic information in a communication comprising body elements and attachment elements to a mobile device includes the steps of determining if the communication includes an attachment element comprising cryptographic information and converting the attachment element into a body element upon determining that the communication includes an attachment element comprising cryptographic information.

French Abstract:

Cette invention se rapporte a un procede servant a transmettre a un dispositif mobile des informations cryptographiques dans une communication comprenant des elements de corps et des elements de pieces jointes et consistant a cet effet a determiner si la communication contient un element de piece jointe comprenant des informations cryptographiques et a convertir cet element de piece jointe en un element de corps, apres avoir determine que la communication contient un element de piece jointe comprenant des informations cryptographiques.

Alerting Abstract JP A

NOVELTY - The subject name of an electronic mail is entered in the appending image file name during transmission of appended electronic mail image data by control unit.

DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- A. Communication system;
- B. Electronic mail transmitting control method;
- C. Character input mode-control method; and
- D. Storage medium storing image communication program

USE - E.g. facsimile for e-mail communication.

ADVANTAGE - The registering of subject in the file name enables recognizing the receiving party, thus performs easier and simpler mail transmission.

DESCRIPTION OF DRAWINGS - The figure shows the block diagram of the communication system. (Drawing includes non-English language text).

English Abstract:

A method (200) of generating a message comprises the steps of identifying (220) whether a message comprises a subject field containing no characters; processing data content of a message to be transmitted and introducing (230) textual data automatically into the subject field, in response to identifying no characters, and where the textual data is one or more of: message content; message type; an identity of a sender; and an intended recipient of the message. The message with the textual data automatically entered therein to the subject field is then transmit. A communication unit is also described. The automatic incorporating of textual data into the subject field, is convenient to a user and offers improved speed in authoring and sending a usefully labelled message. Furthermore, in the context of mobile phones, it provides a sensitive migration of a mobile phone user's experience from SMS to MMS or email messaging.

French Abstract:

La presente invention concerne un procede (200) pour produire un message, comprenant les etapes suivantes: identification (220) de si un message comprend ou non un champ sujet qui ne contient aucun caractere; traitement du contenu de donnees d'un message a transmettre, et introduction (230) automatique de donnees textuelles dans le champ sujet, en reponse a l'identification d'absence de caractere. Selon l'invention, les donnees textuelles sont du contenu message et/ou un type de message et/ou l'identite d'un expéditeur et/ou un destinataire du message. Le message dont le champ sujet contient les donnees textuelles saisies automatiquement, est ensuite transmis. L'invention a egalement pour objet une unite de communication. L'incorporation automatique de donnees textuelles dans le champ sujet, s'avere utile pour l'utilisateur et permet d'obtenir une vitesse amelioree pour la creation et l'envoi d'un message marque de facon utile. De plus, dans le contexte des telephones mobiles, l'invention permet une migration efficace des aptitudes d'un utilisateur de telephone mobile, du SMS au MMS ou a la messagerie electronique.

English Abstract:

An e-mail management method for managing electronic mail messages includes classifying incoming e-mail messages using ripple down rules stored in a rule base, wherein each rule is defined by at least one or more rule conditions and a rule conclusion. According to the method, if a particular e-mail message is not appropriately classified according to any existing rule in the rule base a new rule is built by selecting rule conditions based upon characterising features of the particular e-mail message, specifying a rule conclusion to be assigned to the particular email message and to each subsequent message that is classified according to the new rule, and adding the rule defined by said rule conditions and rule conclusion to the rule base. A system and software product implementing the method are also provided.

French Abstract:

Procede servant a gerer des messages de courrier electronique et consistant a classer les messages d'arrivee au moyen de regles hierarchisees memorisees dans une base de donnees, chaque regle etant definie par au moins une ou plusieurs conditions et par une conclusion. Selon ce procede, si un message determine n'est pas classe de facon adequate en fonction de toute regle existant dans la base de donnees, une nouvelle regle est elaboree par selection de conditions basees sur les caracteristiques de ce message determine, par specification d'une conclusion a affecter a ce message et a chaque message suivant classe en fonction de la nouvelle regle et par introduction dans la base de donnees de regles de la regle definie par lesdites conditions et ladite conclusion. L'invention concerne egalement un systeme et un logiciel de mise en application de ce procede.

Alerting Abstract RD A

The program adds an 'attach to the desktop' button to the application help. When the button is depressed, the contents of help are converted to the text file and **attached** to the desktop. The text file is **named using** the 'title' of help. The file name is can be customised.

Alternatively a copy right message is inserted to the text file and set with the attribute of 'read only'. The file is referred to by double clicking the icon.

ADVANTAGE - Allows viewing of frequently used help text without launching help of application.

A letter input apparatus and method which make it possible to speedily and easily select a necessary letter from many kinds of letters while using a control dial input apparatus. By providing a control dial input apparatus 11 for generating command signals for forward direction and backward direction revolutions and a press-down, a microcomputer 12 for controlling a letter to be displayed based on the command signals, an OSD controller 13 for generating image information out of letter information and a display unit for displaying the generated image information, selection is conducted by moving a one dimensional cursor with a step for selecting one group of letters arranged and displayed in two dimensional fashion and a step for selecting a letter from the selected group of letters.

Text:

...at \$3,500, also include support for an Isocor-developed standard for file attachment lists.

The company is promoting the standard, called Manifest, through the **Electronic Messaging Association (EMA)**. Manifest is a separate text attachment that lists the names of files attached to a message and identifies them as Multipurpose Internet Mail Extension (MIME), X.400, or DOS file objects, Knight said.

Isocor is also shipping an X.400 router for Notes, which links Notes Mail and the Isoplex server. The router provides message transfer; directory synchronization will be added next year.

Isocor, based in Los Angeles, is at (310) 476...

The Three Faces of E-Mail

Nelson, Fritz; Karpis, Marios

InfoWorld v14n14 pp: 105-116

Apr 6, 1992

ISSN: 0199-6649 **Journal Code:** IFW

Word Count: 12083

Text:

...or received as drafts to modify and send later. Information can easily be moved and copied between folders. Folders, however, cannot be deleted in Beyond Mail. Messages and attachments can also be saved to disk.

Search options include the ability to search through a single folder or all folders at once (or a selected few) by form type, to, cc, date, and **subject** information (or any item **related** to a particular form), **attached file names**, by whether a receipt was requested, or by message contents. You can even use relational operators to find messages. Sample rules applications contain an issue...which, if set to do so, will automatically open at the "To" line with an address list. You can carbon copy other users, but Microsoft Mail still does not offer blind carbon copies. **After** entering a **subject**, you can assign priorities (1 to 5 and Registered) and **attach** multiple **files**. You can simply enter paths and file **names**, or select files from directory lists. Preference settings let you customize whether to forward attached files automatically.

The Microsoft Mail Address menu allows users to browse through post office lists or manually enter names to create personal address lists. You can get information on address...

Document Type: Column
ISSN: 0007-666X
Language: English
Record Type: Fulltext; Abstract
Word Count: 764 **Line Count:** 00059

...Microsoft Exchange and Outlook, the various web browsers, the proprietary services like CompuServe and AOL, etc.) are now quite good at taking an incoming e-mail and separating the text portion of the message from the encoded binary file, then placing the e-mail text in your "In" basket and the decoded binary file in some other subdirectory under its original name. Similarly, these e-mail packages also encode any binary file that you attach to your outgoing e-mail and stick the encoded text right after your e-mail message before committing it to the bowels of the Internet.

What you occasionally see as a lot of garbage at the end of an e-mail is actually an attachment that your e-mail program was unable to recognize and properly decode. Don't blame your e-mail program for this. The odds are just as good that whoever sent you the attached file had an e-mail program that messed up the...
